Subject: Application for a Scholarship for a Master's Degree in Artificial Intelligence

Dear Sir or Madam,

Passionate about intelligent technologies and their ability to provide concrete solutions to complex problems, I have progressively oriented my academic career toward the field of artificial intelligence. Wishing to deepen this specialization in a demanding international university environment, I am submitting my application for a scholarship to enroll in a Master's program in Artificial Intelligence in Romania.

Currently a third-year undergraduate student in Computer Science, specializing in Information Systems and Software Engineering — a program I will complete in July — I have built my academic path with rigor and consistency. Holding a Baccalaureate in Experimental Sciences with the distinction of "Very Good" (16.40/20), I have completed my entire university curriculum without any repeated years or remedial exams, maintaining an overall GPA of 15.12/20. These results have allowed me to graduate as the top student among 92 peers, a distinction that reflects my academic commitment and work ethic.

Throughout my studies, I have developed a particular interest in machine learning, data analysis, and algorithmic modeling. This direction is currently taking shape through my graduation thesis on an artificial intelligence-related topic, which I will defend in the near future. Additionally, I will be completing a practical internship at Algérie Télécom, a major player in Algeria's telecommunications sector, an experience that will allow me to further consolidate my technical and professional skills.

Enrolling in this Master's program represents an essential step in the realization of my professional goals. My ambition is to ultimately pursue a career in artificial intelligence research and innovation, particularly through a doctoral degree, in order to contribute to the development of technological solutions with significant scientific and societal impact. I also aim to participate in international collaborative projects and to put the skills I acquire to work in service of technological development.

I am proficient in French and English, and am currently learning German in order to further strengthen my academic and international openness.

Receiving this scholarship would be a decisive support in carrying out this project under the best possible conditions. It would allow me to devote myself fully to my studies and to make the most of the academic and scientific opportunities offered by your program. I view this support as an investment in a path built on excellence, research, and innovation.

You will also find enclosed letters of recommendation written by my thesis supervisor and by the director of my research laboratory, attesting to my seriousness, commitment, and academic potential.

Convinced that this program represents an ideal environment for deepening my skills and developing high-impact projects, I am fully prepared to invest with rigor and determination in order to worthily represent the host institution.

I thank you for the attention given to my application and remain at your full disposal for any additional information.

Yours sincerely,

Anis HADEF
